

Boiler Automation Service

We carry out automation and burner service on your boiler, IGG and incinerator plants. It does not matter whether it is planned maintenance or an urgent request, we will help you however, whenever, and wherever you need it. No job is too big or too small!

It is important to us that your boiler is in safe operating condition. Our service jobs are performed in close cooperation with your vessel's responsible boiler crew members, so they can receive knowledge and training on your boiler system from us.

Additionally, to help you in the future, our service jobs come with an automation report which includes a list of recommended spare parts.

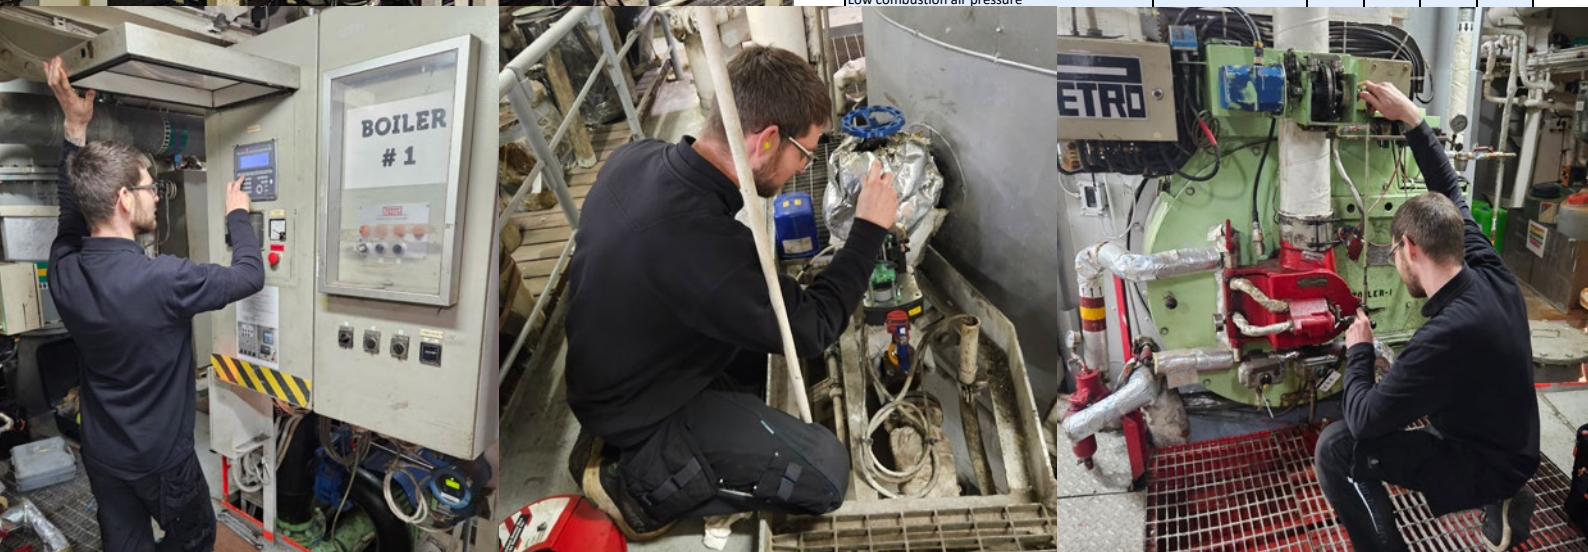

Service engineers are available from all three locations: Dubai, Singapore and Denmark.

For inquiries please E-mail us: service@globalboiler.com
