

Linear actuator

Electrical actuators are preferable because they require less maintenance, and provide a more accurate adjustment. These are, therefore, perfect for optimising the position of your FD-fan and/or bypass damper. Should you need your pneumatic actuators replaced with new fully electrical actuators, we are ready to assist you.

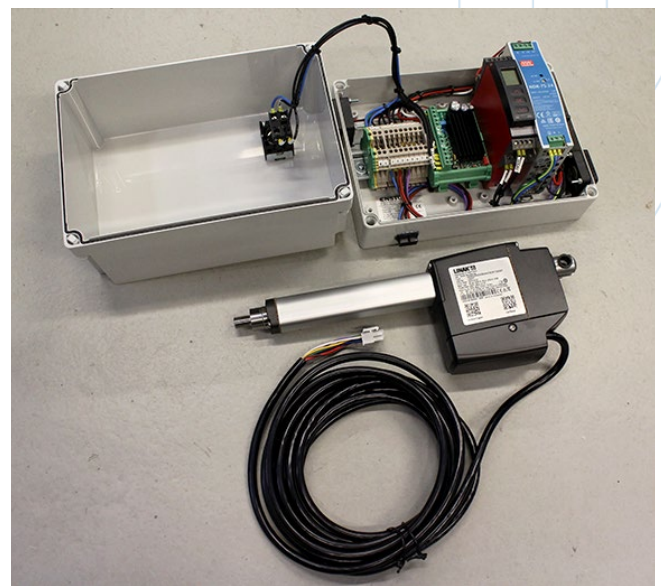

All our actuators are fully compliant with the marine industry. They come with a robust design and are simple to install as plug-and-play solutions with built-in endstop switches and a pre-assembled control box.

Linear actuator for precise and steady damper control.

Retrofit to existing plants

- Various plug-and-play solutions available
- Built-in endstop switches
- Low maintenance
