

# Incinerators

After a long service life, the internal condition of your incinerator can require minor patch up work or even extensive repairs. We carry out everything from refurbishment of all brands and models to complete replacement of the refractories. Thus, it does not matter which kind of incinerator you have installed, nor which condition it is in. We aim to make any repairs to your incinerator while the vessel is still in operation and functional.

The repair time typically range from 1 to 2 weeks, but we always aim to be as fast as possible, and with materials in stock in all our warehouses located in Denmark, Singapore and Dubai, there will be no delay between us receiving the job and us commencing the repair.

Our Service Engineers are able to assist on any requirements you might have with your automation / Control system and incinerator burner.
